

NUCLEUS

NUCLEUS DISTRIBUTION PVT LTD

Corporate Profile

ABOUT US

Nucleus Distribution Pvt. Ltd. is a fast-growing information and communication technology company, formed with a team of highly dedicated, reputable, qualified and experienced professionals to serve the needs of Pakistan's information technology industry. As a fine integrated team, Nucleus Distribution Pvt. Ltd. has been playing a leading role in introducing emerging technologies and Information Technology products for local market.

We serve as a single source for Design & Consultancy, Budgeting and Material Procurement for LAN Infrastructure, Data Centers and Wireless solutions. We strive to serve our customers to the utmost level of their satisfaction by providing up-to-date technology solutions to cater for their current and future business requirements. Working closely with our customers to better understand the requirements has been the foundation of forming strong and lasting relationships.

Our consultancy and technology solutions provide value additions and serve as a key factor to address our customer's problems and pain points. We strongly believe in leading the innovation curve with our out-of-the-box thinking. This approach along with our keen insight into the changing technologies and trends helps us provide best-fit solutions for your business needs.

MISSION STATEMENT

To be the leading choice of all businesses for IT Consultancy, Design and Material Procurement by providing unparalleled, effective and efficient technology solutions that keep businesses a step ahead.

VISION STATEMENT

Our Vision is to be recognized and trusted as the leading IT Consultancy, Design and Material Procurement entity of Pakistan by providing IT solutions which allows Business Information Systems to operate efficiently and productively.

Our success and growth is result of the referrals and testimonials from business customers about the successful implementation of the products and services we deliver.

We follow of a simple and unique approach which is “We are our client’s IT department”. We serve our customers by providing them with evaluating their business IT requirements, technology planning for current and future IT needs, solution offering and budgeting.

Core components of our success comprises of teamwork, knowledge and experience combined with integrity, loyalty and passion.

SOLUTIONS & SERVICES OFFERED

Nucleus Distribution Pvt. Ltd. strives to provide quality products and services to its valued client.

Our solutions and services offerings comprises of following:

- ❖ Data & Voice Infrastructure Design & Consultancy
- ❖ Data Center Design & Consultancy
- ❖ Software Technology Solutions
- ❖ Turnkey Infrastructure Solutions
- ❖ Project Management
- ❖ Network Testing, Audit and Documentation
- ❖ Specialized Data Center Maintenance

DATA & VOICE INFRASTRUCTURE DESIGN & CONSULTANCY

In today's world, converged complex technologies and changing business environments are among the main challenges faced by organizations on their growth path. The infrastructure design and consultancy needs to be undertaken by an organization that not only has a proven experience but can also offer a comprehensive range of data & voice infrastructure solution.

With proven experience of designing and consulting voice and data solutions, in a wide range of client environments we have developed a strong reputation in this domain.

Our skilled team has the ability to respond to your requirements promptly and with the knowledge it takes to integrate it successfully with your business or enterprise.

Please contact us to explore the broad range of voice and data cabling solutions we can deliver for your business.

DATA CENTER DESIGN & CONSULTANCY

Nucleus Distribution Pvt. Ltd. provides data center/computer room design and consulting services as well.

We are distinctively skilled to help businesses assess their data center/computer room requirements, provide recommendations for improvement and offer budgetary and accurate cost estimations.

Our focus is to provide data center/computer room solutions with high availability, scalability, redundancy, fault-tolerance and manageability.

The design process starts with our team determining the business's data center/computer room objectives and availability requirements. A thorough joint survey of the existing systems and facilities is carried out. We then work with the IT staff and the facility staff to identify and quantify the data center/computer room project needs and combine them with our understanding of the technology trends and industry standards & best practices required to adapt to future changes. Finally, we develop a conceptual data center design/computer room design from which we formulate bill of quantities and budgets

The three most important parameters of our design comprises of:

- ❖ High-availability
- ❖ Flexibility & Scalability
- ❖ Simplicity

High-Availability

All data center designs are judged by their ability to deliver continuous operations for the network services they support. The availability is affected by both planned (scheduled maintenance) and unplanned (failures) events. To maximize availability, the impact from each of these must be minimized and/or eliminated.

Moreover all data centers must be maintained on a regular basis to avoid failure events. In most data center designs, scheduled maintenance is a planned event requiring network downtime. For this reason, general maintenance is often forgone, leaving long-term availability to a risk. In robust data center designs, concurrently maintainable systems are implemented to avoid interruption to normal data center operations.

To lessen unplanned outages, both redundancy and fault-tolerance must be incorporated into the data center design. High-availability is accomplished by providing redundancy for all, major and minor, systems, thereby eliminating single points of failure.

Flexibility & Scalability

A data center must support fast, seamless, growth, and deployment of new services without a major overhaul of its infrastructure and without a major disruption to its operation.

A good data center must be designed to ensure flexibility to adapt to changing business conditions and corresponding IT requirements. The design must be built around modularity i.e. use of modular systems, in which the characteristics of the modules are known and addition of modules are simple.

Scalability is the design concept of proactively planning for changing requirements and is another key component of design. A data center that is scalable has the capacity to sustain rapid planned growth in terms of the number of devices that it can host and the quality of services offered. The use of modular systems is an excellent strategy to address growth issues without major disruptions.

Simplicity

Human error is the most common cause of down time every year. We incorporate simplicity element in the design of data centers/computer rooms which in turn reduces chance of failures due to human error, also decreases cost of implementation and provides ease in monitoring, manageability, and maintainability.

The above attributes when incorporate in the design results in an early and accurate alignment between scope, schedule and budget.

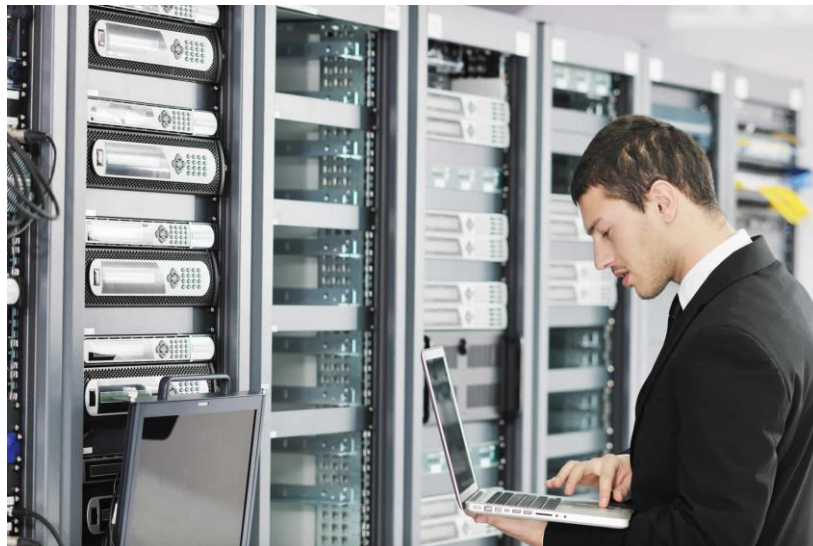

TURNKEY INFRASTRUCTURE SOLUTIONS

Nucleus Distribution Pvt. Ltd. provides a full range of IT infrastructure and network cable installation services for its customers. We are specialized in installation of low voltage structured cabling systems for voice, data and other IP devices with a focus to deliver competitive and exceptional quality service.

Turnkey infrastructure solution is a sequential process and comprises of following elements:

Requirements Elicitation, Analysis and Specification:

Requirements Analysis is the process of understanding the customer needs and expectations from a proposed system. It can alternatively be a statement of 'what' the solution is expected to do. This step of the process comprises of having multiple interactions with the customers to understand their need and then coming up with a flexible and scalable solution for the organization.

The comprehensive analysis of the existing requirements and infrastructure combined with future organizational needs results in formulation of specification of the solutions.

Solution Proposal & Project Costing:

Once the requirements and specification have been spelled out, a formal solution proposal along with technical documentation, project timelines and project costing is submitted to customer for their review and approval. The project is being followed-up by our sales and technical individuals to guide customers through the submitted proposal. Once solution has been technically and financially approved by the customer, we move to solution implementation phase.

Solution Implementation:

A team of professionally trained and certified staff is brought in for implementation of solution. All standards, training expertise and best practices are followed by the staff to ensure smooth installation. Infrastructure of all the network/IP stations are tested and a set of documentation which included testing reports, site layout and as-built drawings are submitted to the customer for ease in moves and changes and trouble shooting. Alternatively a training can also be arranged for the customer upon their request to ensure smooth hand over of the installed solution.

Nucleus Distribution Pvt. Ltd. offers complete solutions for data and voice structured wiring/cabling systems including Copper and Fiber Network, Network Upgrades, Network Testing, Documentation, Maintenance, Re-Location, etc..

We use quality cables and hardware, and the latest networking technologies, so that our LANs make office environments expandable, manageable, and organized.

Please see below some of the key services provide:

- ❖ Network Cable Installations, Wired, Wireless and Hybrid
- ❖ Copper Cable Installations
- ❖ Fiber Optic Cable Installations

PROJECT MANAGEMENT

Project management is a carefully planned and organized effort to accomplish a specific (and usually) one-time objective

Nucleus Distribution Pvt. Ltd. provides project management services for managing simple to complex projects to help your organization succeed. These include:

- ❖ Help and support managing projects
- ❖ Lead projects from start to finish

Best-practices methodologies and strict attention to the detail, positions Nucleus Distribution Pvt. Ltd. as a trusted partner for project management services.

NETWORK TESTING, AUDIT AND DOCUMENTATION

Nucleus Distribution Pvt. Ltd. provide network testing, audit and documentation services for new installations and testing services for existing networks.

Nucleus Distribution Pvt. Ltd. has the expertise to Audit, Test and Document your existing cabling system and test installed cabling using industry standard and state-of-the-art test equipment for copper and fiber optic cabling

Upon completion, documentation is provided in both hard and soft copy formats with recommendations, if any, for improvement of the infrastructure.

- ❖ Testing & Certification of Copper Cabling Systems
- ❖ Testing & Certification of Fiber Cabling Systems

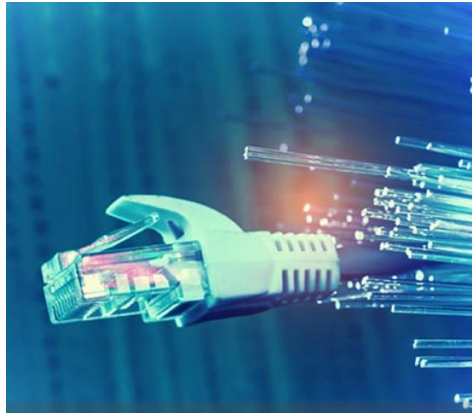

VIVANCO

Vivanco Structred Cabling Solutions:

Nucleus Distribution Pvt. Ltd. is proud to be associated with Vivanco as its authorized distributor in Pakistan market.

Established in 1920 Vivanco a listed company headquartered in Ahrensburg Germany is a multi-specialist manufacturer in the consumer electronics and connectivity solutions space.

Vivanco is now part of an diversified MNC conglomerate group with annual group turnover of over 300 million Euro and over 5000 dedicated professionals with expertise in R&D, sales & marketing, product development, QC, administration and manufacturing spread across Europe, Asia and America is now rapidly expanding into the Asia region.

Vivanco is a multi-specialist manufacturer for equipment and structured cabling solutions in Europe both in terms of breadth and depth of its solution in the consumer electronics and connectivity solutions. The concept "Your Right Connection" encompasses Vivanco's focus to drive their business forward while benefiting from new technologies giving Vivanco a ranking of No. 2 overall for consumer electronics in Germany.

Vivanco offers end-to-end integrated solution in the industry from server room to desk outlet or campus wide network with its complete range of copper, fiber, smart home, data center, racks and security cabling solutions. Backed by dedicated and experienced technical and marketing professionals with average team experience of no less than 10 years.

Vivanco offers comprehensive warranty and product application training to its customers worldwide through its various programs.

Vivanco dedicates long-term commitment to support its customers and partners in the region it operates in is reflected by its individual country policy of hiring dedicated professional, tailor made product and solutions and distribution model along with adapting its best global practices for each country translating to a win-win situation for its customer and partners alike.

Vericom Global Solutions is a leading solutions provider of digital communication and digital energy. With global headquarters in Knoxville, TN, it provides best-in-class solutions to more than 30 countries worldwide.

Vericom integrates the industrial advantages of software and hardware, innovates intelligent manufacturing, and provides safe, reliable, green and energy-saving, full-life-cycle digital communication and digital energy solutions for applications and service needs in different scenarios, help in digital transformation, and accelerating industry and digitalization.

In addition to the innovative design, engineering, and manufacturing capabilities, Vericom is committed to providing solutions with greater efficiency and cost savings to the customers.

Vericom Smart Micro Data Center

The Vericom micro data center is designed to meet the demanding requirements of edge computing. It is a highly integrated, quick to deploy, plug and play, intelligently managed, scalable, fully customizable, convenient and efficient micro data center. With perfectly integrated UPS and power supply/distribution subsystems, cooling subsystems, intelligent management and security subsystems, and an optional cabling pre-termination subsystem, the micro data center is factory tested and arrives ready for installation of IT equipment.

The Vericom micro data center will make your data center infrastructure deployment, operation and maintenance easy and convenient.

Vericom Aisle Containment Solution

The All-in-Room design of the Vericom Cold Aisle Containment Solution is a standardized, modular platform with built-in flexibility to meet a wide variety of requirements. It is a robust solution with built-in features for safety, security, and expandability. Designed for rapid deployment and installation, our energy-efficient platform reduces up-front investment and lowers operation expenses.

- ❖ Sliding entrance doors at both ends
- ❖ Active roof skylight integrated with fire suppression system
- ❖ Designed for continuous rack row without any obstruction, opening, missing rack or columns
- ❖ Easy to install and integrate with most neutral racks from other vendors
- ❖ Access control feature with IC card, fingerprint, and password

Vericom BESS (Battery Energy Storage Solution)

Vericom energy storage container adopts All-in-one design, integrated container, refrigeration system, battery module, PCS, fire protection, environmental monitoring, etc., modular design, with the characteristics of safety, efficiency, convenience, intelligence, etc., make full use of the cabin Inner space.

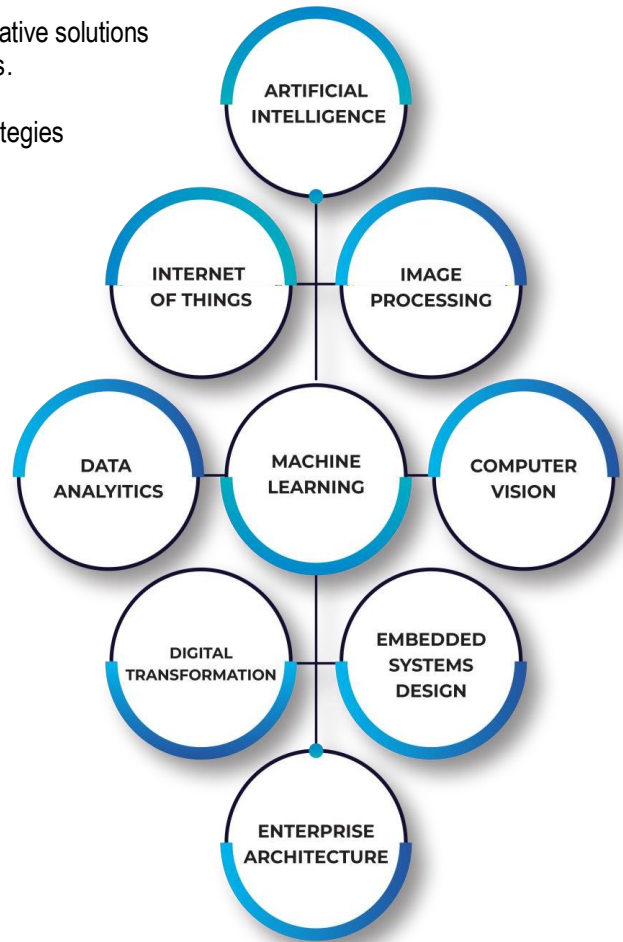

Software Technology Solution

Conceptualized by a team of research engineers and developers, we bring an illustrious experience of research and development of Artificial Intelligence-based systems and Digital systems and full-stack software.

We strive to set exemplary customer service standards and provides innovative solutions for today's complex problems that exceed the expectation of our customers.

Our focus is in translating our clients' requirements into clear AI-based strategies to deliver the most efficient and effective personalized Turnkey Solutions.

Artificial Intelligence & Machine Learning

Machine Learning for Data-Driven Insights

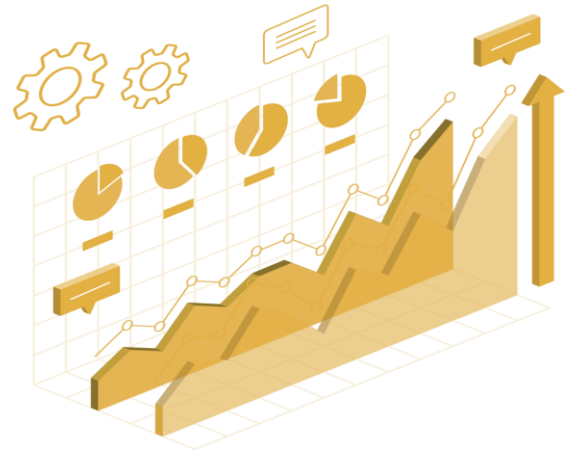

- ❖ Computer Vision
- ❖ Natural Language Processing
- ❖ Data Analytics

Data Analytics

Data-Driven Decision-Making

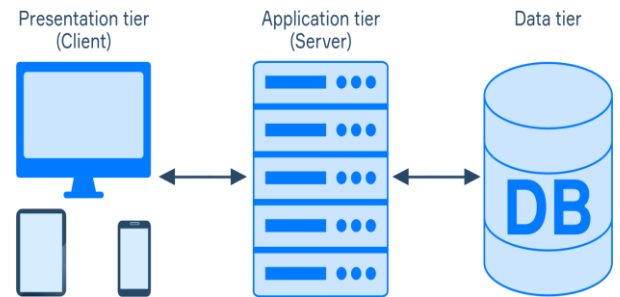

- ❖ Actionable Insights
- ❖ Customized Solutions
- ❖ Competitive Advantage

Full-Stack Development

Robust Back-End Solutions

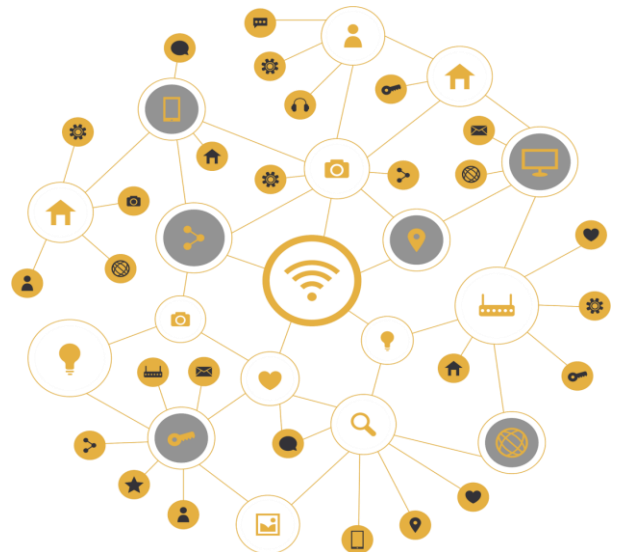

- ❖ Scalable Architecture
- ❖ Data Management Excellence
- ❖ Integration Prowess

The IoT Ecosystem

Empowering Industries with IoT:

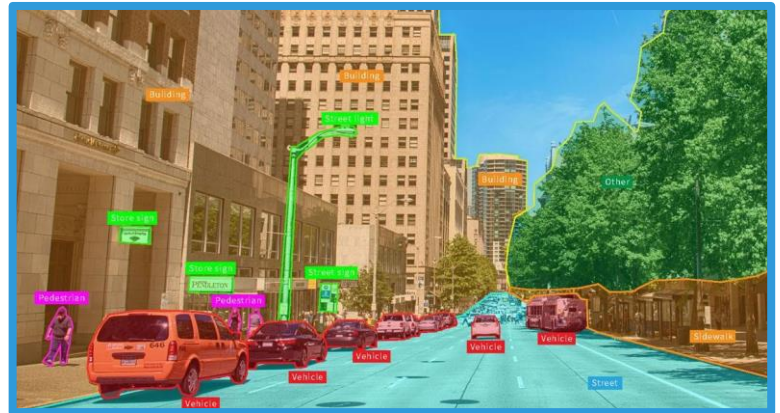

- ❖ Real-Time Monitoring
- ❖ Enhanced Efficiency
- ❖ Scalable and Secure

Visual Data Unleashed

Applications Across Industries:

- ❖ Precision and Accuracy
- ❖ Automation and Efficiency
- ❖ Enhanced User Experience
